Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer (DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes

U.S. Government, Energy Efficiency and Renewable Energy Office, Department of Energy (DOE), Geothermal Technologies Program

Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer (DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes U.S. Government, Energy Efficiency and Renewable Energy Office, Department of Energy (DOE), Geothermal Technologies Program

This comprehensive compilation of DOE documents provides unique and practical information about geothermal heat pumps, including small geothermal systems and DIY systems.

Contents: Chapter 1: Small Geothermal Systems: A Guide For The Do-It-Yourselfer * Chapter 2: Using The Earth To Heat and Cool Buildings * Chapter 3: An Information Survival Kit For The Prospective Geothermal Heat Pump Owner * Chapter 4: Success Stories of the Geothermal Energy Program * Chapter 5: Ground-Source Heat Pumps: Overview of Market Status, Barriers to Adoption, and Options for Overcoming Barriers

A heat pump—like an air conditioner or refrigerator—moves heat from one place to another. In the summer, a geothermal heat pump (GHP) operating in a cooling mode lowers indoor temperatures by transferring heat from inside a building to the ground outside or below it. Unlike an air conditioner, though, a heat pump's process can be reversed. In the winter, a GHP extracts heat from the ground and transfers it inside. Also, the GHP can use waste heat from summer air-conditioning to provide virtually free hot-water heating. The energy value of the heat moved is typically more than three times the electricity used in the transfer process. GHPs are efficient and require no backup heat because the earth stays at a relatively moderate temperature throughout the year. A GHP system has three major components: a ground loop (buried piping system), the heat pump itself (inside the house), and a heating and cooling distribution system. There are two main types of GHP systems. The earth-coupled (or closed-loop) GHP uses sealed horizontal or vertical pipes as heat exchangers through which water, or water and antifreeze, transfer heat to or from the ground. The second type, the water-source (or open-loop) GHP, pumps water from a well or other source to the heat exchanger, then back to the source. Because of their versatility, earth-coupled systems dominate the GHP market. Typical loop installations for the earth-coupled systems are expected to work for 50 years. More than 400,000 GHPs are operating in homes, schools, and commercial buildings in the United States. They are adaptable to virtually any kind of building; the Federal government has installed nearly 10,000 GHPs.

Geothermal resources are available across the United States at varying depths, providing a ubiquitous buried treasure of domestic renewable energy. Enormous amounts of hydrothermal geothermal energy is available in the western United States, but theoretically, geothermal sources are available across the United States. The key to being able to use geothermal energy is to find a way to enhance geothermal systems lacking key natural characteristics. Natural geothermal systems depend on three factors to produce energy: heat, water, and permeability. While heat is present virtually everywhere at depth, water and permeability are less abundant. Geothermal technology is an attractive renewable resource because it can provide a constant source of renewable baseload electricity. While the sun and wind offer a large potential source of renewable

energy that varies over time, geothermal technology is uninterrupted and can provide a stable baseload form of energy while diversifying the nation's renewable portfolio. Geothermal energy has low environmental risk and impact. When used with a closed-loop binary power plant, geothermal systems emit zero greenhouse gas emissions and have a near zero environmental risk or impact.

From reader reviews:

Maureen Perdue:

Do you one among people who can't read pleasant if the sentence chained from the straightway, hold on guys this particular aren't like that. This Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer (DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes book is readable by you who hate those straight word style. You will find the facts here are arrange for enjoyable studying experience without leaving even decrease the knowledge that want to deliver to you. The writer of Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer (DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes content conveys the idea easily to understand by lots of people. The printed and e-book are not different in the content but it just different as it. So , do you nonetheless thinking Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer (DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes is not loveable to be your top record reading book?

Roger Everman:

The knowledge that you get from Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer (DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes could be the more deep you searching the information that hide in the words the more you get considering reading it. It does not mean that this book is hard to understand but Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer (DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes giving you buzz feeling of reading. The article author conveys their point in a number of way that can be understood by means of anyone who read the item because the author of this e-book is well-known enough. This particular book also makes your current vocabulary increase well. Making it easy to understand then can go along with you, both in printed or e-book style are available. We advise you for having that Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer (DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes instantly.

Ross Adams:

Reading a reserve tends to be new life style on this era globalization. With looking at you can get a lot of information that may give you benefit in your life. Together with book everyone in this world can share their idea. Ebooks can also inspire a lot of people. A great deal of author can inspire their very own reader with their story or their experience. Not only situation that share in the guides. But also they write about the knowledge about something that you need instance. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that you can get now. The authors nowadays always try to improve their expertise in writing, they also doing some exploration before they write to their book. One of them is this Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer

(DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes.

Elizabeth Black:

Some individuals said that they feel fed up when they reading a book. They are directly felt the idea when they get a half areas of the book. You can choose often the book Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer (DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes to make your personal reading is interesting. Your current skill of reading proficiency is developing when you similar to reading. Try to choose basic book to make you enjoy to study it and mingle the opinion about book and examining especially. It is to be first opinion for you to like to available a book and read it. Beside that the book Small Geothermal Energy Systems and Geothermal Heat Pumps: Guide for the Do-it-Yourselfer (DIY), Ground Source Heat Pumps, Information Survival Kit for Heat Pump Owners, Energy Program Successes can to be your brand-new friend when you're really feel alone and confuse in doing what must you're doing of these time.
