Bjarne Stroustrup of AT&T Bell Laboratories developed C++ in the early 1980's, and it is based on the C language. With a pun for its name, - "++" is a syntactic construct used in C (to increment a variable), and C++ is intended as an incremental improvement of C. C is a subset of C++, and most C programs can be compiled with a C++ compiler. C is difficult to categorize. It is high-level, but includes several low-level facilities that directly manipulate the computer's tangible and use of memory. An excellent language for writing efficient "systems" programs, but for other types of programs, C language can be difficult to understand, and C programs are particularly disposed to certain errors. Extra object-oriented facilities in C++ are included, in part, to overcome these shortcomings.
