The overall incidence of meningiomas, particularly in the developed countries, is rising due to a growing size of the aging population, with people living longer and enjoying healthier lives than ever before. Additionally, an increased utilization of imaging studies such as computer tomography (CT) and magnetic resonance (MR) for routine evaluation of closed head injuries, paranasal sinus problems and various non-specific neurological symptoms, ranging from headaches to dizziness, has contributed to enhanced detection of incidental meningiomas.

The book contains the most up-to-date information in all matters related to meningiomas, and is written by multiple contributors - internationally recognized experts in their respective fields from Asia, USA and Europe.
