Applied Fluvial Geomorphology for River Engineering and Management

Applied Fluvial Geomorphology for River Engineering and Management

This invaluable overview of fluvial geomorphology provides river engineers and managers, who may lack specialist training, with useful insights into, and understanding of, natural channel forms and fluvial processes. Such information is a pre-requisite for carrying out environmental impact assessments and for developing environmentally sensitive design and management procedures to preserve riverine environments and restore degraded ones. Designing with nature is preferable to imposing hard engineering solutions as it sustains natural biodiversity and minimises costs. This book will also be a very useful teaching aid for students, both under- and post-graduate, studying civil engineering, environmental management or sciences, or geography who are looking to have a wider knowledge of new approaches to the subject. Geomorphology requires the collection and consideration of a wide range of data, mostly field based but also including historical information such as archive documents and maps, which are outside the experience of most river engineers and managers. These data enable the current condition of the river to be explained, both locally and within the catchment, and establish historical changes and future trends. In addition, process studies have now identified many of the mechanisms controlling river morphology which underpin the development of soft, bio-engineering, design procedures. The book incorporates material on methods and techniques of data collection, analysis and interpretation, making extensive use of case studies throughout. Thus the experienced authors go some way towards demystifying applied fluvial geomorphology by demonstrating that, while there is still an element of judgement, major contributions to geomorphic understanding usually come from the careful assemblage and objective analysis of all available data and information.

From reader reviews:

Mary Hopkins:

As people who live in the particular modest era should be upgrade about what going on or data even knowledge to make all of them keep up with the era which can be always change and move ahead. Some of you maybe will probably update themselves by looking at books. It is a good choice for yourself but the problems coming to anyone is you don't know what one you should start with. This Applied Fluvial Geomorphology for River Engineering and Management is our recommendation to make you keep up with the world. Why, as this book serves what you want and wish in this era.

Kyle Gill:

Reading a book can be one of a lot of activity that everyone in the world likes. Do you like reading book thus. There are a lot of reasons why people love it. First reading a guide will give you a lot of new details. When you read a reserve you will get new information mainly because book is one of many ways to share the information or even their idea. Second, reading through a book will make you actually more imaginative. When you studying a book especially fictional book the author will bring you to imagine the story how the characters do it anything. Third, it is possible to share your knowledge to other people. When you read this Applied Fluvial Geomorphology for River Engineering and Management, you are able to tells your family, friends and soon about yours e-book. Your knowledge can inspire average, make them reading a reserve.

Tina Alley:

Spent a free time to be fun activity to do! A lot of people spent their down time with their family, or their own friends. Usually they carrying out activity like watching television, planning to beach, or picnic in the park. They actually doing same every week. Do you feel it? Will you something different to fill your current free time/ holiday? Could possibly be reading a book is usually option to fill your totally free time/ holiday. The first thing that you ask may be what kinds of publication that you should read. If you want to consider look for book, may be the book untitled Applied Fluvial Geomorphology for River Engineering and Management can be great book to read. May be it can be best activity to you.

Carmen Hamm:

Your reading 6th sense will not betray anyone, why because this Applied Fluvial Geomorphology for River Engineering and Management guide written by well-known writer we are excited for well how to make book which might be understand by anyone who all read the book. Written with good manner for you, dripping every ideas and creating skill only for eliminate your hunger then you still uncertainty Applied Fluvial Geomorphology for River Engineering and Management as good book but not only by the cover but also by the content. This is one e-book that can break don't assess book by its handle, so do you still needing one more sixth sense to pick this specific!? Oh come on your looking at sixth sense already told you so why you have to listening to an additional sixth sense.
