Virtual Physics Lab Kinetic Books

Students solve physics equations as they juggle balls, shoot cannons, fly helicopters, drive race cars, and place satellites in orbit. This program would be most appropriate for a high school physics computer lab. At the end of each activity is a save function, so the program can be adapted to different lengths of lab time. It is also useful for self-instruction, home instruction, and examination review. All files can be printed to allow for teacher feedback and assessment. This software collection includes math-based physics activities covering concepts related to motion, Newton's Laws, gravity, sound, electricity, electromagnetism, refraction, and special relativity. Each arcade-like activity includes an introduction, a list of concepts covered, and a varying number of exercises. In "Skeeball," for example, six exercises involve an increasingly difficult level of problem-solving for the concepts of speed, velocity, acceleration, and acceleration and position.
